Summary

Third-year CSE student who builds across the stack — from a published iOS app on the App Store to a live AI-powered web tool built with React and Gemini API. Works with Swift, TypeScript, Node.js and C++, with a focus on shipping things that actually work rather than just knowing the theory. Open to SDE, frontend, or full-stack roles where continuous learning meets day-one contribution.

Education

Galgotias University	2023 – 2027
<i>Bachelor of Technology in Computer Science Engineering</i>	CGPA: 7.5
Maharishi Vidya Mandir, Fatehpur, U.P.	2022
<i>Class XII</i>	CBSE: 76.8%
Maharishi Vidya Mandir, Fatehpur, U.P.	2020
<i>Class X</i>	CBSE: 87.8%

Technical Skills

Languages: Swift, Java, C++, JavaScript, TypeScript, Python
Mobile Development: SwiftUI, ARKit, RealityKit, React Native
Frontend: React, Tailwind CSS, HTML, CSS
Backend & APIs: Node.js, Express.js, MongoDB, SQL, Vercel Serverless Functions
Tools & Platforms: Git, GitHub, Xcode, VS Code, Postman, Figma
Concepts: DSA, OOPs, MVVM Architecture, Agile/Scrum

Projects

CodeAtlas AI React, TypeScript, Vite, Tailwind CSS, shadcn-ui, Gemini 2.5 Flash API, GitHub API	Live Demo
- Built an AI-powered GitHub repository analyzer where users paste any public GitHub URL and instantly get a structured breakdown — project overview, tech stack detection with confidence levels, architecture pattern recognition, key module breakdown with file paths, and code health indicators. - Integrated the GitHub REST API to extract full file trees and key file contents, then engineered a structured prompt pipeline sending repo context to Gemini 2.5 Flash, returning a strict JSON schema covering architecture, data flow, and improvement suggestions. - Designed 3 dedicated Vercel Serverless Functions for repo fetching, AI analysis, and per-file AI explanations — clicking any file triggers Gemini to explain its role, dependencies, and architectural significance in the codebase. - Built an interactive file explorer in React with TypeScript allowing users to browse the full repo tree in-app with smooth Framer Motion animations, deployed on Vercel with zero sign-up and zero setup required.	
Animal Explorer AR SwiftUI, RealityKit, ARKit, AVFoundation, Combine, MVVM	App Store
- Built a free educational iOS app for kids aged 4+ to explore 30+ animals through interactive 3D models, real animal sounds, and rich educational content including habitat, diet, and conservation status. - Developed two AR experiences — a tap-to-place animals feature in the real world and a Food Chain AR builder where kids arrange organisms in the correct ecological order. - Built a custom 3D viewer using RealityKit with 60fps idle animations via CADisplayLink and full gesture support — rotate, zoom, and tap reactions. - Added 3 quiz modes (Sound Quiz, Word Jumble, Category Quiz) with a 7-badge reward system to gamify the learning experience. - Shipped on App Store with zero data collection, compatible with iPhone, iPad, Mac (Apple Silicon), and Vision Pro.	

Achievements

- Secured **NCC 'A' and 'B' Certificates** — demonstrated leadership, discipline, and teamwork through structured military-style training, parades, and camps.
- Active **competitive programmer** — solving DSA problems on LeetCode with focus on arrays, graphs, dynamic programming, and trees.

Certifications

- Oracle:** Database Design with SQL
- iOS Development Bootcamp**
- Smart India Hackathon (SIH)** Participant
- AICTE – EduSkills:** Generative AI Virtual Internship (Google Cloud)
